PREFACE.

FOR an intelligent understanding of the Classics and Ancient History, a familiarity with the geography of ancient nations is imperative. It is not enough that an ancient atlas be placed in the hands of the student, to be used merely as a book of reference. Experience has taught that he must have a certain amount of thorough drill in map study and map drawing. To this end these few lessons have been prepared. It is believed that even in their brief scope they furnish all the drill that is necessary in this line in fitting for college.

The practice of looking up myths or historical facts connected with places is of three-fold importance; it trains the student in the use of books of reference, helps by association to fasten in the mind locations, and teaches mythology and history. This practice, together with that of tracing historic "routes," will serve to make the study of Ancient Geography alive and interesting, whereas it otherwise may be a dry and uninteresting subject. Some one hundred and forty names have been printed in black type for mythological or historical reference. Others may be added to these

at the option of the teacher or student. Blank pages have been inserted, to be used by the pupil for taking notes on these and other topics.

Several standard atlases were consulted in the preparation of these lessons. They are, therefore, based upon no one atlas to the exclusion of all others, but may be used with any good work of the kind containing well-defined maps.

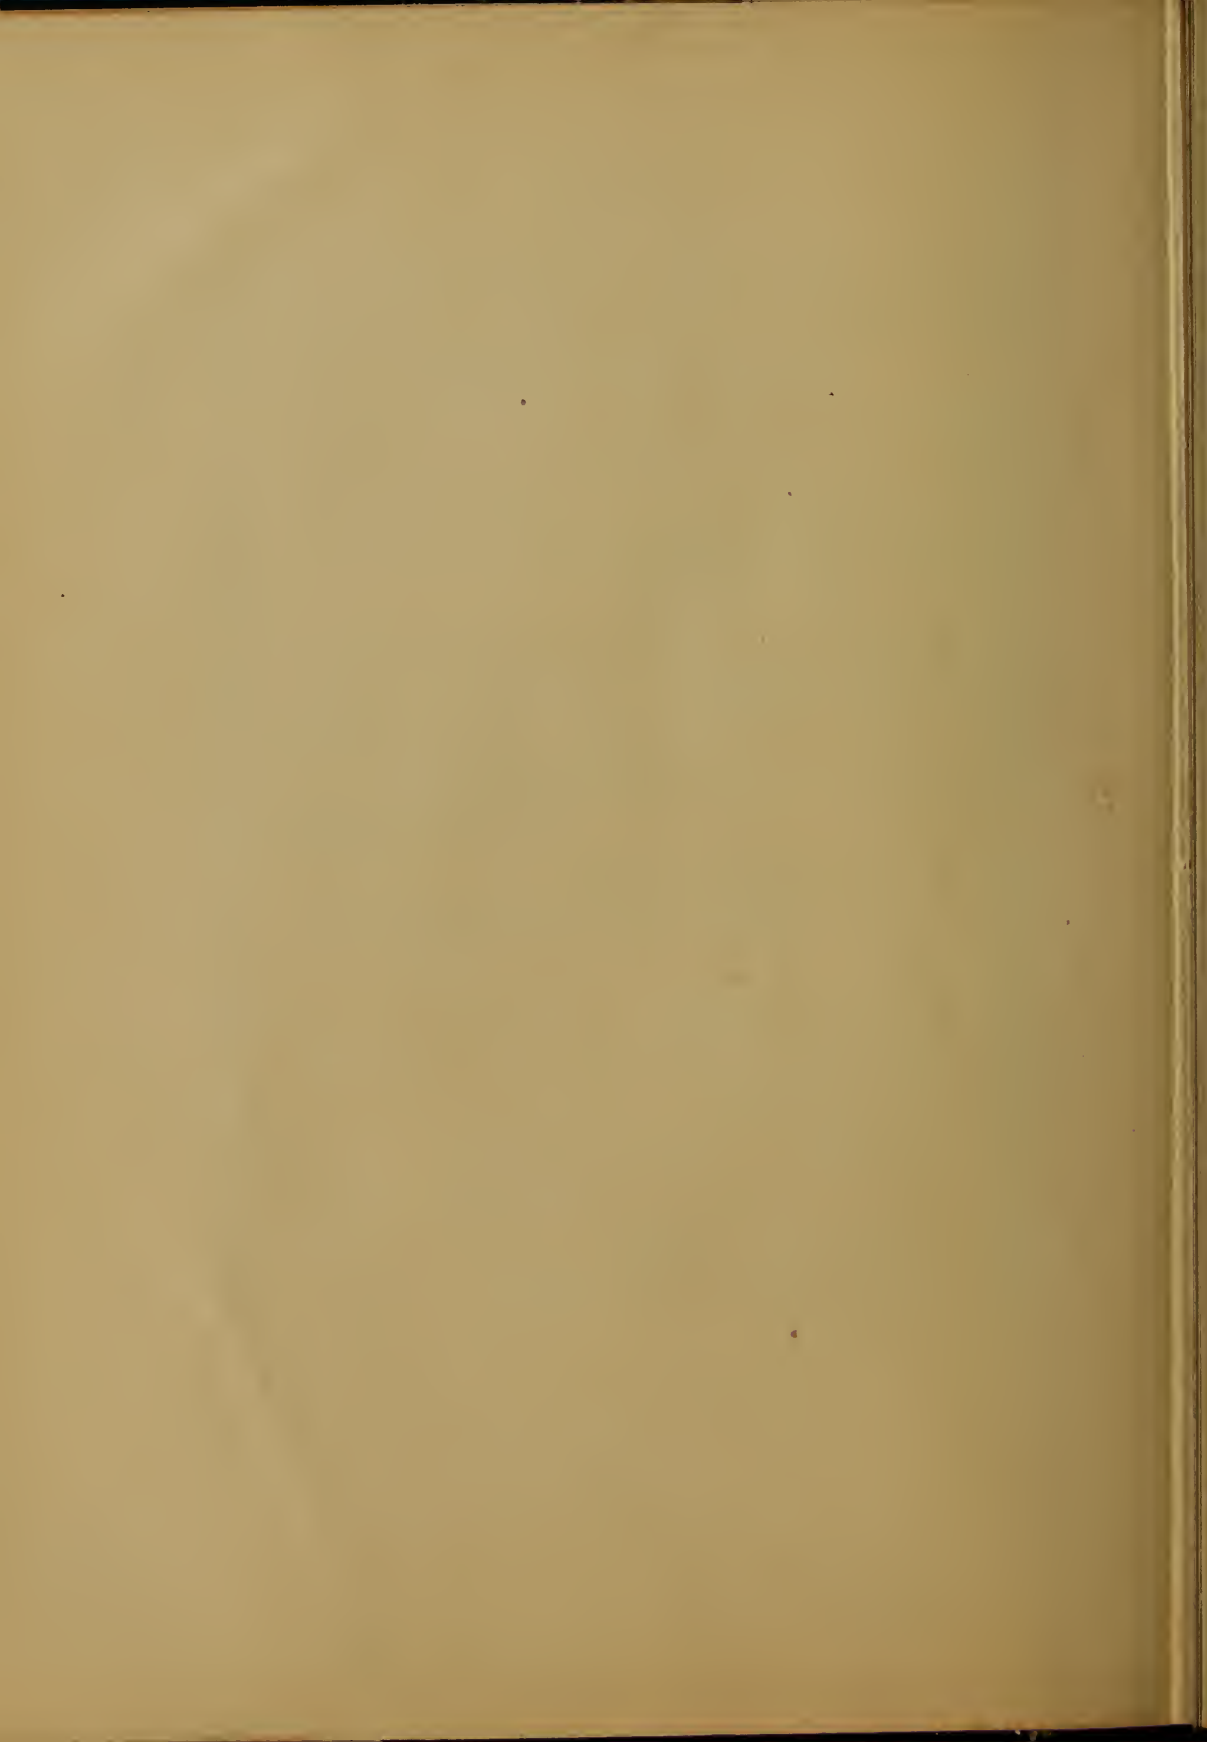

All topics called for, and not found in the Ancient Geography, may be found readily in a good Ancient History or Classical Dictionary.
